SUMMARY

Third-year Computer Science undergraduate specializing in end-to-end software development. Proficient in building dynamic, responsive frontend interfaces, paired with robust backend engineering experience. Skilled in designing scalable RESTful APIs, implementing secure authentication systems, and producing comprehensive API documentation to ensure seamless integration and maintainability.

WORK EXPERIENCE

Kamunesia Media Arta **July 2026 – Present**

Software Engineer Freelance

- Spearheaded the frontend modernization of a legacy web application, successfully migrating the platform from a monolithic WordPress architecture to a custom**,** high-performance web solution.
- Engineered a dynamic and responsive user interface by rapidly adopting and implementing **React.js** and **Tailwind CSS**, ensuring scalable, clean, and maintainable component-based code.
- Elevated the platform's user experience (UX) by delivering a highly professional, intuitive, and visually appealing design that significantly enhanced content readability and user engagement.

PROJECTS

Suplaihub-API | (Node.js, Express.js, Winston, JWT, REST, PostgreSQL, Swagger)

- Developed a supply chain platform API in **Express.js** where suppliers manage product catalogues and buyers add items to a shopping cart for seamless checkout with clean Layered/MVC architecture.
- Enforced **JWT**-based authentication and Role-Based Access Control (RBAC) across endpoints to manage granular permissions between Client and Supplier roles.
- Implemented production-grade observability featuring structured JSON logging with **Winston** to capture request workflows.
- Automated interactive API documentation using **Swagger** UI for end-to-end testing across all 14 endpoints.

Motoservis | (Flutter, Dart, Node.js, Express.js, JWT, REST, PostgreSQL, Postman)

- Designed and implemented UI/UX for a motorcycle service reminder application, focusing on usability and intuitive user flows using **Flutter**.
- Implemented **JWT** authentication and **Google OAuth** for secure user authentication and authorization.
- Developed **REST** with **Express.js**, integrating frontend services with **Supabase PostgreSQL** and validated REST API endpoints using **Postman.**

EDUCATION

Bina Nusantara University – Bachelor of Computer Science **Expected Graduation: August 2028**

- **CGPA**: 3.54/4.00
- **Relevant Coursework**: Object-Oriented Programming (OOP), Data Structures, Algorithm Design and Analysis, Database Technology, Software Engineering, Software Architecture.

SKILLS

Languages: JavaScript, TypeScript, C, HTML, CSS, SQL.
Developer Tools: Git, Postman, Swagger, Supabase.
Libraries/Frameworks: React.js, TailwindCSS, Node.js, Express.js, Winston.
Databases: PostgreSQL, MySQL.
